EQUINE RUBBER MATS

Equine rubber matting is designed to improve safety, comfort and durability in horse transport and stable environments. Commonly used in horse floats, tailgates, stables and wash-down areas, these mats provide a non-slip rubber surface to reduce the risk of slipping during loading, unloading and standing.

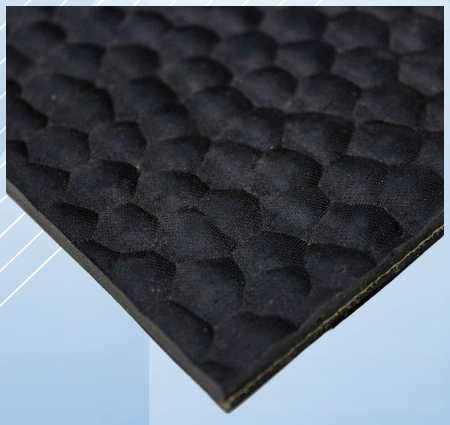

Manufactured from heavy-duty rubber, equine mats offer cushioning underfoot while withstanding repeated use and exposure to moisture. Suitable for permanent or replacement installations, they are easy to cut to size and ideal for demanding equine applications where traction and durability are essential.
